Caverion renews framework agreement with Energinet for overhead line work on the Danish transmission grid

Press release
3 November 2026 at 07:45 CET

Caverion Denmark has renewed its framework agreement with Energinet for overhead line work on the Danish transmission grid. The agreement marks an important step in the long-standing cooperation between the two companies and supports the continued development and maintenance of Denmark's critical electricity infrastructure.

The framework agreement covers reinvestments, major maintenance projects and other project assignments on the 132 kV, 150 kV and 400 kV overhead line network. The agreement runs for three years, with an option to extend it for two additional one-year periods. The total framework agreement has a value of DKK 810 million, with Caverion appointed as the leading contractor under the agreement.

For several decades, Caverion and Energinet have worked together on a number of significant projects on the Danish transmission grid. Caverion is currently contributing, among other projects, to the refurbishment of the overhead line connection on Funen between Fraugde and Landerupgaard, as well as the overhead line connection on Zealand between Asnæsværket and Hovegaard.

"The renewal of the framework agreement is strong recognition of the efforts of our employees, our organisation and the expertise we have built up in overhead line work over many years," says **Bjørn Krogsgaard Letager**, Head of High Voltage, Caverion Denmark.

"With the increasing electrification of society, we face even greater investment needs and infrastructure requirements. I am therefore proud of Energinet's continued confidence in Caverion. With our specialised expertise in overhead line work, we look forward to contributing to a robust and future-proof transmission grid, which is essential for security of supply and Denmark's green transition," he continues.

"Over the coming years, Energinet will carry out a large number of projects to expand and strengthen the Danish electricity grid. As activity levels increase and projects become more complex, access to competent partners becomes increasingly important. Together with skilled partners, the right solutions must be identified to ensure a high level of security of electricity supply while supporting the development of the electricity grid of the future," says **Thomas Eybye Petersen**, Senior Category Manager at Energinet.
